**IMPORTANT INFORMATION**

**FOR USE ONLY AS AN AGRICULTURAL / HORTICULTURAL / INDUSTRIAL / FORESTRY / AQUATIC HERBICIDE**

**Crops/situations:**
- All edible and non-edible crops (destruction, before sowing/planting).
- Grassland.
- Natural surfaces not intended to bear vegetation; permeable surfaces overlaying soil; hard surfaces.
- Enclosed waters, open waters, land immediately adjacent to aquatic areas.
- Forest, forest nursery (weed control, stump application and chemical thinning).
- Apples, pears; plums, cherries, damsons.
- Amenity vegetation.

**Maximum individual dose:**

**Maximum number of treatments:**

**Latest time of application:**

**Other specific restrictions:**

*READ THE LABEL BEFORE USE.* USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.

**SAFETY PRECAUTIONS**

**Operator protection**

* Engineering control of operator exposure must be used where reasonably practicable in addition to the following personal protective equipment:
  * WEAR SUITABLE PROTECTIVE GLOVES when handling the concentrate and when handling contaminated surfaces.
  * WEAR SUITABLE PROTECTIVE CLOTHING (COVERALLS), SUITABLE PROTECTIVE GLOVES AND RUBBER BOOTS when using hand-held sprayers, hand-held rotary atomisers, weed wiper equipment or spot gun equipment or when making cut stump treatments OR WHEN USING STEM INJECTION EQUIPMENT.
  * However, engineering controls may replace personal protective equipment if a COSHH assessment shows they provide an equal or higher standard of protection.

**Environmental protection**

Do not contaminate water with the product or its container except when used as directed. Do not clean application equipment near surface water.

Avoid contamination via drains from farmyards and roads.

**Recommended use**

Recommendations apply to the use of this herbicide for the control of weeds growing in or by water and must be read in conjunction with the Official Code of Practice entitled Guidelines for the Use of Herbicides on Weeds in or near Water-courses and Lakes obtainable from Department of Environment and Rural Affairs (DEFRA publications 08459 556000), Scottish Executive, Environment and Rural Affairs Department, Department of Agriculture and Rural Development for Northern Ireland and the National Assembly for Wales Agriculture Department. The Water Act, 1989, The Water Resources Act 1991, the Control of Pollution Act 1974. The Northern Ireland Water Resources Act 1992 and the Control of Pollution and Local Government (Northern Ireland) Order 1978, may apply to the act of applying Roundup ProVantage for the control of weeds growing in or by reservoirs and water courses, e.g. rivers, streams, ditches, drains and ponds/lakes discharging into such water courses.

**Storage and disposal**

**KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS. KEEP OUT OF REACH OF CHILDREN.**

KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place. RINSE CONTAINER THOROUGHLY by using an integrated pressure-rinsing device or manually rinse three times. Add washings to sprayer at time of filling and dispose of safely. Triple rinsed containers may be disposed of as non-hazardous waste.

**Medical advice**

Medical guidance is available on a 24 hours basis by telephoning the National Chemical Emergency Centre on 01865 407333 or for doctors, from the National Poisons Information Service on 0844 8920111.
DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

Warnings
EXTREME CARE SHOULD BE TAKEN TO AVOID SPRAY DRIFT AS THIS CAN SEVERELY DAMAGE NEIGHBOURING CROPS OR PLANTS.

DO NOT MIX, STORE OR APPLY ROUNDUP ProVantage IN GALVANISED OR UNLINED STEEL CONTAINERS OR SPRAY TANKS.

DO NOT leave spray mixtures in tank for long periods and make sure tanks are WELL VENTED.

Restrictions
A period without rain of at least 6 hours and preferably 24 hours must follow application of Roundup ProVantage.

Do not spray onto weeds which are naturally senescent, or where growth is impaired by drought, high temperature, a covering of dust, flooding or frost at, or immediately after application, otherwise poor control may result.

Do not spray in windy conditions as drift onto desired crops or vegetation can severely damage or destroy them.

Do not tank-mix Roundup ProVantage with adjuvants, pesticides or fertilisers, except as specified in the Compatibility section.

After application, large concentrations of decaying foliage, stolons, roots or rhizomes should be dispersed or buried by thorough cultivation before crop drilling.

Applications of lime, fertiliser, farmyard manure and pesticides should be delayed until 5 days after application of Roundup ProVantage.

Keep stock out of treated areas for at least 5 days. TREATED POISONOUS PLANT SPECIES MUST BE REMOVED BEFORE REGRAZING OR CONSERVING.

Weeds controlled
Roundup ProVantage herbicide controls most emerged grasses and broad-leaved weeds. It is important that all weeds are at the correct growth stage when treated, otherwise some re-growth may occur and this will need re-treatment.

Apply Roundup ProVantage herbicide once grasses and broad-leaved weeds have emerged and they have ACTIVELY GROWING green leaves.

PERENNIAL GRASSES must have full emergence of healthy, green leaf. (Common Couch, for example, becomes susceptible at the onset of tillering and new rhizome growth, which usually occurs when plants have 4-5 leaves, each with 10-15 cm of new growth).

PERENNIAL BROAD-LEAVED WEEDS are most susceptible around the flowering stage.

ANNUAL GRASSES AND BROAD-LEAVED WEEDS should have at least 5 cm of leaf, or 2 expanded true leaves, respectively. In set-aside, annual grasses are best treated at full ear emergence, or before stem elongation. Application during the stem extension phase of annual grasses e.g. Black-grass and Brome species on set-aside between the end of April and end of May, may result in poor control and require re-treatment.

BRACKEN should be treated after frond tips are unfurled, but pre-senescence.

OTHER SPECIES - recommendations for specific Areas of Use are given in the Recommendation Tables.

This product will not give an acceptable level of control of Horsetails (Equisetum arvense)-repeat treatment will be necessary.

Aquatic
Roundup ProVantage herbicide controls emerged and floating aquatic weeds including Common Reed, Reed Sweet-grass, Reed Canary-grass and Water-lily.

Treat when the weeds are actively growing with full emergence of green leaf, at flowering and before dieback. Best results are obtained from applications in the periods from mid-July to mid-August on Water-lilies and mid-August to mid-September on Reeds.

Following crops (Subsequent land use following application of Roundup ProVantage)
Upon soil adsorption the herbicidal properties of Roundup ProVantage are lost permitting the drilling of crops 48 hrs after application. Planting of trees, shrubs, etc. may take place 7 days after application.

| Natural surfaces not intended to bear vegetation, permeable surfaces overlaying soil, hard surfaces | 3.75 l/ha/year | - | - |
| Enclosed waters, open waters, land immediately adjacent to aquatic area. | 3.75 l/ha/year | - | - |
| Forestry: Weed control | 7.5 litres/hectare | - | - |
| Stump application | 150 ml/litre of water (15% solution of product in water) | - | - |
| Chemical thinning (by injection) | 1.5 ml per 10cm diameter (or less) of tree | - | - |
| Amenity vegetation | 3.75 litres/hectare | - | - |

Other Specific Restrictions:
Users must consult the appropriate water regulatory body (Environment Agency/Scottish Environmental Protection Agency/Natural Resources Wales) before using the product near water and must obtain their agreement before using this product to control aquatic weeds. The maximum concentration of active substance in treated water should not exceed 0.2 ppm.

When applying through rotary atomisers, the spray droplet spectra produced must be of a minimum Volume Median Diameter (VMD) of 200 microns.

Weed wipers may be used in any recommended crop where the wiper or chemical does not touch the growing crop.
When using weed wipers, the maximum concentrations used must not exceed the following:
- Weed wiper Mini: 1:3 dilution with water
- Other Wipers: 1:2 dilution with water

For stump application the maximum concentration must not exceed 200ml product per 1.0 litre water.

AMENITY, INDUSTRIAL AND GENERAL WEED CONTROL

Exclusion Times
People, pets and wildlife need not be kept out of treated areas. It is best not to walk in areas where the spray is still wet as transfer to other vegetation may lead to unwanted damage to other foliage. Once the spray is dry this cannot occur.

Area of Use
Roundup ProVantage is recommended for control of annual and perennial grasses and broad-leaved weeds in non-crop areas, for cleaning up weedy ground prior to planting or sowing and for aquatic weed control. Roundup ProVantage may also be used as a directed spray in ornamental plantings, orchards and for spot treating weeds in grassland. Roundup ProVantage must be targeted only at weed growth on hard surfaces such as roadsides and paths, (see recommendation table for details).

Application Rate
1.5 to 4.5 litres/ha – refer to Recommendation Tables

Application Guidance
Use the following guidance when spraying at a rate of 5 l/ha.
For more details of suitable nozzles see ‘Mixing and spraying section.’

Roundup ProVantage can also be applied using rotary atomisers and weed wipers. See ‘Mixing and Spraying’ section.

Japanese Knotweed control

Japanese Knotweed is an invasive alien species reducing biodiversity in areas where it becomes established and propagating from tiny fragments of root, often spreading along watercourses. It is scheduled under the Wildlife and Countryside Act 1981 and all parts of the plant must be treated as Controlled Waste under the Environmental Protection Act 1990.

Roundup ProVantage can be used alone as part of an eradication programme or as part of an integrated programme in conjunction with soil disturbance or removal. Dormant rhizomes will not be controlled by Roundup ProVantage, but may be stimulated to grow by soil disturbance and then sprayed. It is particularly suitable for use near water. Sites must be monitored for at least three years and re-treated as necessary.
**Area of Use**

Amenity vegetation; Forestry; Natural surfaces not intended to bear vegetation, permeable surfaces overlying soil, hard surfaces; Enclosed waters, open waters, land immediately adjacent to aquatic area

(*) For improved control of Rhododendron add Mixture BNF (ADJ AO570) at a concentration of 2% final water volume to 6.
Caution: The timing of hardening of leader growth varies considerably between locations and between seasons. It may occur directed away from leaders.

Mixing and spraying
Roundup ProVantage mixes readily with water and can be applied in spray volumes ranging from 10 - 400 l/ha using tractor mounted, knapsack, rotary atomisers and hand-held sprayers. Specialised application equipment such as weed wipers, stem injection and spot gun applicators may be used where indicated.

Correctly calibrate all sprayers under field or use conditions prior to application.

a) Tractor mounted and powered hydraulic sprayers These should be capable of applying accurately 80 - 400 l/ha within a pressure range of 1.5 - 2.5 bars (20 - 35 psi).
Half fill the spray tank with clean water, start gentle agitation, and then add the correct amount of

</tr>
</tbody>
</table>

Roundup ProVantage. Top up the tank with water to the required level. To avoid foaming do not use top tank agitation. Use of a defoamer may be necessary. **Medium Volume application (150 - 300 l/ha)** Avoid high water volumes (300 l/ha) which may lead to run-off from the treated vegetation, resulting in reduced control. Low drift nozzles such as air induction and pre-orifice types producing a medium or coarse spray (BCPC definition) should be used to minimise the risk of drift. **Low Volume Application (minimum 80 l/ha)** Low volume application can be achieved by reducing pressure and the appropriate nozzle selection. Low drift nozzles which produce a medium spray quality (BCPC definition) should be used to minimise the risk of drift.
When used in paddocks keep livestock out of treated area until treated Ragwort or other poisonous
weeds have either been removed or died down completely.

When used in paddocks keep livestock out of treated area until treated Ragwort or other poisonous
weeds have either been removed or died down completely.

**Compatibility**

Roundup ProVantage is physically compatible with some other pesticides. For up to date informa-
tion on compatible products contact Mon-
santo UK Limited (tel: 01954 717575) or visit www.monsanto-ag.co.uk.

Roundup ProVantage is compatible with Mixture B NF (ADJ 0570). Where conventional hydraulic
sprayers are being used Mixture B NF may be added to the spray tank solution, at a rate of 2% of
the final water volume, for all pre-plant and post-plant directed sprays only.
DO NOT APPLY WITH MIXTURE B NF TO EDIBLE CROPS, GRASSLAND OR AQUATIC WEEDS.

Do not tank-mix Roundup ProVantage when using rotary atomiser sprayers.
N.B. Maintain continuous agitation when using Roundup ProVantage in a tank-mixture.
For knapsack sprayers: mix thoroughly and use immediately when using Roundup ProVantage in tank mixture.
Always consult manufacturers’ recommendations before use.

COMPANY ADVISORY INFORMATION
This section is not part of the Product Label under the Plant Protection Products Regulations 1995 and provides additional advice on the product.

General Information
Roundup ProVantage herbicide is an advanced formulation containing glyphosate. Roundup ProVantage is taken up by foliage and translocated to underground roots, rhizomes and stolons, providing control of both annual and perennial grasses and broad-leaved weeds. Roundup ProVantage is rapidly adsorbed onto particulate matter in soils and water and is quickly degraded by the micro-organisms present in soil and aquatic bottom sediments. Until degraded, the active ingredient in Roundup ProVantage, glyphosate, is practically immobile in soils and is, therefore, unlikely to contaminate groundwater.

Roundup ProVantage is a glyphosate formulation which, having no hazard classification, offers a high standard of operator safety. To maximise the intrinsic safety of Roundup ProVantage to operator, consumer and environment, the label recommendations and the DEFRA/HSC/NAW publication “Code of Practice for the Using Plant Protection products” of January 2006, should be adhered to.

Symptoms on the weeds
Symptoms of treatment are generally first seen 7 -14 days, or longer, if growth is slow after spraying. Leaf symptoms take the form of a reddening then yellowing of the foliage and are first seen on the grass weeds but take longer to appear on broad-leaved weeds. Reaction of nettle is slow.
For aquatic weed control, on reeds and grasses leaf symptoms usually appear within 14-21 days of spraying in the early autumn. Complete foliage desiccation usually occurs 30-40 days after spraying. At this stage the reeds can be cut and removed. During cold conditions leaf symptoms may not appear before natural dieback but no growth will occur in the season following spraying.

Effects of weather
See Directions for Use (Restrictions).
Roundup ProVantage will remain efficacious at low but not freezing temperatures however the onset of symptoms will be delayed.
A covering of dew may reduce efficacy where run-off occurs.
Reduced control is likely where weed growth is impaired by natural senescence, drought, high temperature, a covering of dust, flooding or severe/prolonged frost at, or immediately after application.

Weed resistance strategy
Glyphosate, the active ingredient in Roundup ProVantage is a Group G herbicide based on the mode of action classification system of the Herbicide Resistance Action Committee.
Under Best Practice there is a low risk for the development of weed resistance to Roundup ProVantage. There are no known cases of weed resistance to glyphosate in UK.
Strains of some annual weeds have developed resistance to glyphosate in some parts of the world leading to poor control. A strategy for preventing and managing such resistance should be adopted. This should include integrating herbicides with a programme of cultural control measures and /or active ingredients with a different mode of action.
Users are encouraged to implement a weed resistance strategy based on (a) Good Agricultural Practices and (b) Good Plant Protection Practices by:
- Following label recommendations on rates and timing.
- The adoption of Integrated Weed Management practices
- Minimising the risk of spreading weed infestations
- The implementation of good spraying practice to maintain effective weed control
- Using the correct nozzles to maximise coverage
- Application only under appropriate weather conditions
- Monitoring performance and reporting any unexpected results to Monsanto UK Ltd (Tel: 01954 717575).
General Cautions
Take extreme care to avoid drift, particularly when using near or alongside hedgerows. The use of low drift nozzles such as ‘air induction’ and ‘pre-orifice’ nozzles are recommended.

New generation weedwipers
Logic Contact 2000
Carier Rollmaster
Allman Ecowipe
Rotowiper (UK) Ltd
C-Dax Eliminator
Weedswiper

Disposal
Follow the guidance on the disposal of surplus spray solution, tank washings, concentrate and containers as given in Section 5 of the DEFRA/HSC/NAW publication “Code of Practice for using Plant Protection Products” of January 2006.

Sprayer hygiene
It is essential to thoroughly clean-out spray tanks, pumps and pipelines and nozzle or disc assemblies, with a recommended detergent cleaner, between applying this product and other pesticides to avoid contamination from pesticide residues.

Environmental Information Sheet
An Environmental Information Sheet for this product is available from the CPA’s Voluntary Initiative website (www.voluntaryinitiative.org.uk) or can be downloaded from www.monsanto-ag.co.uk

Trademark References
Roundup is a Registered Trademark of Monsanto Technology LLC.
Monsanto and the Vine symbol are registered trademarks of Monsanto Technology LLC.
All other brand names referred to are trademarks of other manufacturers in which proprietary rights may exist.
Monsanto does not warrant that the purchase or use of equipment mentioned in this document will not infringe any patent or trademark registration.

MATERIAL SAFETY DATA SHEET
This Safety Data Sheet does not form part of the label approved under the Plant Protection Products Regulations 1995.

Following the instructions on this Product Label for the specified uses should ensure that the product is used safely and efficaciously for those uses.

The information on this Safety Data Sheet is based on the best available information at the time of going to print. Any updates to this Safety Data Sheet from the date of printing are available on request (telephone Monsanto Technical Helpline 01954 717575) or can be downloaded from the Monsanto website: www.monsanto-ag.co.uk
2. HAZARDS IDENTIFICATION

2.1. Classification

2.1.1. Classification according to Regulation (EC) No. 1272/2008 [CLP] (manufacturer self-classification)

Not classified as dangerous.

Not classified as dangerous.

EU label (manufacturer self-classification) - Classification/Labelling following the EU Dangerous Preparations’ Directive 1999/45/EC.

2.1.2. National classification - UK

Not classified as dangerous.

2.1.3. CLP Annex VI Index No.: Not applicable

1.1.6. REACH Reg.No.: Not applicable.

2.2. Labelling elements

Labelling according to Regulation (EC) No. 1272/2008 [CLP]

2.2.1. Precautionary statement/statements

P234 Keep only in original container

2.2.2. Supplemental hazard information

EUH401 To avoid risks to human health and the environment, comply with the instructions for use.

2.2.3. Precautionary statement/statements U.K.

P234 Keep only in original container

2.3. Other hazards

0% of the mixture consist of ingredient/ingredients of unknown acute toxicity.

0% of the mixture consist of ingredient/ingredients of unknown hazards to the aquatic environment.

2.3.1. Potential environmental effects

Not expected to produce significant adverse effects when recommended use instructions are followed.

Not persistent, bioaccumulative or toxic (PBT) nor a very persistent, very bioaccumulative (vPvB) mixture.

2.4. Appearance and odour (colour/form/odour):

Brown/Liquid/Caramel

Refer to section 11 for toxicological and section 12 for environmental information.

3. COMPOSITION/INFORMATION ON INGREDIENTS

Active ingredient

Potassium salt of N-(phosphonomethyl)glycine; Potassium salt of glyphosate

4. FIRST AID MEASURES

Use personal protection recommended in section 8.

4.1. Description of first aid measures

4.1.1. Eye contact

Immediately flush with plenty of water. If easy to do, remove contact lenses. If there are persistent symptoms, obtain medical advice.

4.1.2. Skin contact

Take off contaminated clothing, wristwatch, jewellery. Wash affected skin with plenty of water. Wash clothes and clean shoes before re-use.

4.1.3. Inhalation

Remove to fresh air.

4.1.4. Ingestion

Immediately offer water to drink. Do NOT induce vomiting unless directed by medical personnel. If symptoms occur, get medical attention.

4.2. Most important symptoms and effects, both acute and delayed

4.2.1. Potential health effects

Likely routes of exposure: Skin contact, eye contact

Eye contact, short term: Not expected to produce significant adverse effects when recommended use instructions are followed.

Skin contact, short term: Not expected to produce significant adverse effects when recommended use instructions are followed.

Inhalation, short term: Not expected to produce significant adverse effects when recommended use instructions are followed.

4.3. Indication of any immediate medical attention and special treatment needed

4.3.1. Advice to doctors

This product is not an inhibitor of cholinesterase.

4.3.2. Antidote

Treatment with atropine and oximes is not indicated.
5. FIRE-FIGHTING MEASURES

5.1. Extinguishing media

5.1.1. Recommended: Water, foam, dry chemical, carbon dioxide (CO₂)

5.2. Special hazards

5.2.1. Unusual fire and explosion hazards

Minimise use of water to prevent environmental contamination.

Environmental precautions: see section 6.

5.2.2. Hazardous products of combustion

Carbon monoxide (CO), phosphorus oxides (PₓOᵧ), nitrogen oxides (NOₓ)

5.3. Fire fighting equipment

Self-contained breathing apparatus. Equipment should be thoroughly decontaminated after use.

5.4. Flash point

Does not flash.

6. ACCIDENTAL RELEASE MEASURES

Use handling recommendations in Section 7 and personal protection recommendations in Section 8.

6.1. Personal precautions

Use personal protection recommended in section 8.

6.2. Environmental precautions

6.3. Methods for cleaning up

SMALL QUANTITIES: Flush spill area with water. LARGE QUANTITIES: Absorb in earth, sand or absorbent material. Dig up heavily contaminated soil. Collect in containers for disposal. Refer to section 7 for types of containers. Flushing residues with small quantities of water. Minimise use of water to prevent environmental contamination.

Refer to section 13 for disposal of spilled material.

7. HANDLING AND STORAGE

Good industrial practice in housekeeping and personal hygiene should be followed.

7.1. Precautions for safe handling

Avoid contact with eyes. When using do not eat, drink or smoke. Wash hands thoroughly after handling or contact. Do not contaminate drains, sewers and water ways when disposing of equipment rinse water. Empied containers retain vapour and produce residue. Observe all labelled safeguards until container is cleaned, reconditioned or destroyed.

7.2. Conditions for safe storage

Minimum storage temperature: -15°C

Maximum storage temperature: 50°C

Compatible materials for storage: stainless steel, fibreglass, plastic, glass lining. Keep out of reach of children. Keep away from food, drink and animal feed. Keep only in the original container. Partial crystallization may occur on prolonged storage below the minimum storage temperature. If frozen, place in warm room and shake frequently to put back into solution.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1. Airborne exposure limits

<table>

</tr>
</tbody>
</table>

8.2. Engineering controls

No special requirement when used as recommended.

8.3. Recommendations for personal protective equipment

8.3.1. Eye protection

If there is significant potential for contact: Wear chemical goggles.

8.3.2. Skin protection

If repeated or prolonged contact: Wear chemical resistant gloves. Chemical resistant gloves include those made of waterproof materials such as nitrile, butyl, neoprene, polyvinyl chloride (PVC), natural rubber and/or barrier laminate.

8.3.3. Respiratory protection

No special requirement when used as recommended.

When recommended, consult manufacturer of personal protective equipment for the appropriate type of equipment for a given application.

9. PHYSICAL AND CHEMICAL PROPERTIES

These physical data are typical values based on material tested but may vary from sample to sample. Typical values should not be construed as a guaranteed analysis of any specific lot or as specifications for the product.

10. STABILITY AND REACTIVITY

10.1. Reactivity
Reacts with galvanised steel or unlined mild steel to produce hydrogen, a highly flammable gas that could explode.

10.2. Stability
Stable under normal conditions of handling and storage.

10.3. Possibility of hazardous reactions
Reacts with galvanised steel or unlined mild steel to produce hydrogen, a highly flammable gas that could explode.

10.4. Incompatible materials
Incompatible materials for storage: galvanized steel, lined mild steel
Compatible materials for storage: see section 7.2.

10.5. Hazardous decomposition
Thermal decomposition: Hazardous products of combustion: see section 5.

11. TOXICOLOGICAL INFORMATION
This section is intended for use by toxicologists and other health professionals.
Likely routes of exposure: Skin contact, eye contact
Data obtained on more concentrated products and components are summarized below.

More concentrated formulation

Acute oral toxicity
Rat, LD50: 2,000 mg/kg body weight
No mortality.

Acute dermal toxicity
Rat, LD50: 2,000 mg/kg body weight
No mortality.

Skin irritation
Rabbit, 3 animals, OECD 404 test:
Redness, individual EU scores: 0.3; 0.0; 0.0
Swelling, individual EU scores: 0.0; 0.0; 0.0
Days to heal: 5

Eye irritation
Rabbit, 3 animals, OECD 405 test:
Conjunctival redness, individual EU scores: 0.7; 1.0; 0.7
Conjunctival swelling, individual EU scores: 1.0; 1.0; 0.7
Corneal opacity, individual EU scores: 0.0; 0.0; 0.0
Iris lesions, individual EU scores: 0.0; 0.0; 0.0
Days to heal: 3
Slightly irritating to eyes but not sufficient for classification.

Skin sensitization
Guinea pig, 9-induction Buehler test:
Negative. No skin sensitization

N-(phosphonomethyl)glycine

Glyphosate

Mutagenicity
Not mutagenic.

Repeated dose toxicity
Rabbit, dermal, 21 days:
NOAEL toxicity: 5,000 mg/kg body weight/day
Target organs/systems: none
Other effects: none
Rat, oral, 3 months:
NOAEL toxicity: 20,000 mg/kg diet
Target organs/systems: none
Other effects: none

Chronic effects/carcinogenicity
Rat, oral, 24 months:
NOAEL toxicity: 8,000 mg/kg diet
Target organs/systems: eyes
Other effects: decrease of body weight gain, histopathologic effects
NOEL tumor: >20,000 ppm
Tumours: none

Toxicity to reproduction/fertility
Rat, oral, 2 generations:
NOAEL toxicity: 10,000 mg/kg diet
NOAEL reproduction: 30,000 mg/kg diet
Target organs/systems in parents: none
Other effects in parents: decrease of body weight gain
Target organs/systems in pups: none
Other effects in pups: decrease of body weight gain
Effects on offspring only observed with maternal toxicity.

Developmental toxicity/teratogenicity
Rat, oral, 6 - 19 days of gestation:
NOAEL toxicity: 1,000 mg/kg body weight
NOAEL development: 1,000 mg/kg body weight
Other effects in mother animal: decrease of body weight gain, decrease of survival
Developmental effects: weight loss, post-implantation loss, delayed ossification
Effects on offspring only observed with maternal toxicity.

Rabbit, oral, 6 - 27 days of gestation:
NOAEL toxicity: 175 mg/kg body weight
NOAEL development: 175 mg/kg body weight
Target organs/systems in mother animal: none
Other effects in mother animal: decrease of survival
Developmental effects: none

12. ECOLOGICAL INFORMATION
This section is intended for use by ecotoxicologists and other environmental specialists.
Data obtained on product and components are summarized below.

More concentrated formulation

Aquatic toxicity, fish
Rainbow trout (Oncorhynchus mykiss):
Acute toxicity, 96 hours, static, LC50: 1,039 mg/L
Acute toxicity, single dose, LD50: >3,851 mg/kg body weight.

Whole fish: BCF: 1

Aquatic toxicity, invertebrates
Water flea (Daphnia magna):
Acute toxicity, 48 hours, static, EC50: 243 mg/L

More concentrated formulation

Aquatic toxicity, algae/aquatic plants
Green algae (Selenastrum capricornutum):
Acute toxicity, 72 hours, static, EC50: 118 mg/L

Arthropod toxicity
Honey bee (Apis mellifera):
Oral, 48 hours, LD50: 279 g/bee

Honey bee (Apis mellifera):
Contact, 48 hours, LD50: 282 g/bee

Soil organism toxicity, invertebrates
Earthworm (Eisenia fetida):
Acute toxicity, 14 days, LC50: 10,000 mg/kg dry soil

Soil organism toxicity, microorganisms
Nitrogen and carbon transformation test:
27 L/ha, 28 days: Less than 25% effect on nitrogen or carbon transformation processes in soil.

N-(phosphonomethyl)glycine

Avian toxicity
Bobwhite quail (Colinus virginianus):
Dietary toxicity, 5 days,
LC50: 4,640 mg/kg diet

Mallard duck (Anas platyrhynchos):
Dietary toxicity, 5 days,
LC50: 4,640 mg/kg diet

Bobwhite quail (Colinus virginianus):
Acute oral toxicity, single dose,
LD50: >3,851 mg/kg body weight.

Bioaccumulation
Blugill sunfish (Lepomis macrochirus):
Whole fish: BCF: 1

No significant bioaccumulation is expected.

Dissipation
Soil, field:
Half life: 2 - 174 days
Koc: 884 - 60,000 L/kg
Adsorbs strongly to soil.

Water, aerobic:
Half life: 7 days

13. DISPOSAL CONSIDERATIONS

13.1. Waste treatment methods

13.1.1. Product
Keep out of drains, sewers, ditches and water ways. Recycle if appropriate facilities/equipment available. Dispose of as hazardous industrial waste. Burn in proper incinerator. Burn in special, controlled high temperature incinerator. Follow all local/regional/national/international regulations.

13.1.2. Container
See the individual container label for disposal information. Empty packaging completely. Triple or pressure rinse empty containers. Pour rinse water into spray tank. Ensure packaging cannot be reused. Do NOT re-use containers. Store for collection by approved waste disposal service. Recycle if appropriate facilities/equipment available. Emptied containers retain vapour and product residue. Observe all labelled safeguards until container is cleaned, reconditioned or destroyed. Follow all local/ regional/national/international regulations.

Use handling recommendations in Section 7 and personal protection recommendations in Section 8.
14. TRANSPORT INFORMATION
The data provided in this section is for information only. Please apply the appropriate regulations to properly classify your shipment for transportation.
Not regulated for transport under ADR/RID, IMO, or IATA/ICAO

15. REGULATORY INFORMATION
15.1. Other regulatory information
SP1: Do not contaminate water with the product or its container.

15.2. Chemical Safety Assessment
A Chemical Safety Assessment per Regulation (EC) No. 1907/2006 is not required and has not been performed.
A Risk Assessment has been performed under Directive 91/414/EC.

16. OTHER INFORMATION
The information given here is not necessarily exhaustive but is representative of relevant, reliable data. Follow all local/regional/national/international regulations. Please consult supplier if further information is needed. In this document the British spelling was applied. Significant changes versus previous edition. Registered trademark.

This Safety Data Sheet has been prepared following the Regulation (EC) No. 1907/2006 (Annex II) as last amended by Regulation (EC) No. 453/2010
