

RHS rootgrow™ mycorrhizal fungi

The best start and a lifetime of benefits for your plants

rootgrow™ contains mycorrhizal fungi suitable for use on flowering plants, trees, shrubs and edibles. Within as little as four weeks, **rootgrow™** creates an entire secondary root system that will support a plant or tree for its lifetime.

This results in:

- Superior water and nutrient uptake with enhanced natural vigour.**
- More abundant flowers and heavier cropping.**
- Plants needing less synthetic fertilizer and surviving better in dry conditions.**
- Added resilience in overcoming replant problems.**

How to use

For cuttings and plants, sprinkle **rootgrow™** evenly into the base of the planting hole, so that the granules are in direct contact with the roots.

For seeds and bulbs, cover the granules with a small amount of soil and plant as normal.

Application rates

Pot size	No. of 10ml scoops	No. of plants treated	Treatment ml
2L	2	8	20
5L	4	4	40
10L/15L	7	2	70
25L	12	1	120
50L	16	1	160

Aftercare

rootgrow™ can be used in conjunction with slow release natural fertilizers. The mycorrhizal fungi are unaffected by most commercially available fungicides, although these should be avoided in the first four weeks. Once opened store in a cool, dry place. If stored correctly, the product can be used up to one year after opening.

Keep away from children and pets.

Do not inhale dust.

Contains

rootgrow™ is produced in the UK and contains mineral carriers, species of UK origin arbuscular mycorrhizal and ectomycorrhizal fungi. **rootgrow™** is not effective on Rhododendrons, Azaleas, Heathers, Cranberries and Blueberries. For these plants try our new **rootgrow™** ericoid. **rootgrow™** is ineffective on Brassicas.
